Question : There lies the value of 'x' on a particular page, of a certain volume, on a specific shelf, at a distinct wall, located in a given hexagonal chamber of the library of Babel.
Insert the value of x into "CTF{x}" and you shall have your flag.

The location of x is given in <downloadable_file.txt>

Possible Hint : Browse through the library of Babel (an online archive) using the given values in order to find x.

Solution : The flag `CTF{zawarudo}` can be found on the website
https://libraryofbabel.info/browse.cgi by simply plugging in the given values one step at a time. (The given values are in the txt file in the main directory of the question).
Given values :
Hex (in file)
Wall : 4
Shelf : 5
Volume : 16
Page : 116

Steps to reach there are shown below :-

congrats on making it. the value of x is zawarudo

Additional Notes : This is meant to be an easy and freebie question. Can be made slightly more convoluted if needed, by say providing a code at this page found in the Library of Babel. This code could be either for a google doc or rather, a google classroom (something students are more familiar with). Regardless, using the code would take you to a page containing the actual flag.
